ATTENTION PRECASTERS - WEBINAR AVAILABLE!

Dear Amy,

Feedback from attendees at our recent seminars on the new AS 3850 *Prefabricated concrete elements* and Safety in Design, is that it **must** be heard by not only by precasters, but by the builders and engineers who work with precast too.

The new standard has a HUGE impact on safety requirements for engineers and builders.

Until attendees attended the seminars, they stated that they had not realised the extent of the impact... particularly the Duties imposed by the legislated requirement for designers to fulfil their Safety in Design responsibilities.

If you and your colleagues attended the seminars, that's a great start!

But if you didn't, (or you did and want to reinforce your understanding) you now have the opportunity to purchase a recorded webinar, which you can watch at your own pace over the next 90 days.

This information is core to what you do every day.

We also strongly recommend you forward this email to the engineers and builders you work with. If they too understand the requirements it will make your life a lot easier.

Not only is it in your best interests, but it is in theirs too, to fully understand their obligations under the safety legislation and how the new Standard might assist them to comply and reduce their exposure.

I urge you to register for the webinar yourself and to encourage your clients to as well.

Thank you and kind regards,

Sarah Bachmann
CEO
National Precast
