

Urgent Representation & Advocacy

March 2017

URGENT FEEDBACK REQUIRED

Proposed amendment to AS 3850.2:2015 'Prefabricated concrete elements Building construction' to change erection documentation requirements.

Standards Australia has this morning called for urgent feedback on a proposal to revise Clauses 2.5.2 and C4.4.6. It will detail safe practices for rigging and handling, using common lifting devices and methods.

The proposed changes would apply to all lifting methods (eg flat, edge, face lifting & rotation) and would have a significant impact on the detail required on erection documentation.

CICA and Safework NSW have both supported these changes.

Refer to the following link:
