

The project is set to provide major benefits for a large volume of motorists who take the route daily.

**PROJECT SNAPSHOT**

**PROJECT:** M12 Central Interchange  
**LOCATION:** Badgerys Creek, NSW  
**NATIONAL PRECAST MEMBER:** Ozcast  
**CLIENT:** Transport for NSW

# CONNECTING WESTERN SYDNEY'S FUTURE

The M12 Motorway is a key transport link for the new Western Sydney International (Nancy-Bird Walton) Airport, providing direct access between the M7 and The Northern Road. The Central Interchange at Badgerys Creek forms the heart of this new 7.5 kilometre dual-carriageway connection, involving a series of complex bridge structures, ramps, retaining walls and traffic management systems designed to accommodate future growth and high traffic volumes.

The project posed a number of challenges typical of large-scale infrastructure works, including intricate bridge geometry, varying load requirements, strict quality standards, and an ambitious delivery schedule.

National Precast Member Ozcast was engaged to deliver a range of high-performance precast elements for multiple structures across the interchange, supplying a suite of structural and civil components including barriers, bridge parapets and retaining wall panels.

**PRECAST INNOVATION IN ACTION**

Drawing on its advanced production systems and in-house engineering expertise, Ozcast adapted mould designs

and reinforcement configurations to suit the unique conditions of each site. This responsiveness minimised design changes, reduced delays, and ensured components met the highest quality and dimensional standards. Controlled curing and rigorous quality assurance supported the project's demanding specifications.

**MEETING COMPLEXITY WITH ADAPTABILITY**

The project demanded a high level of coordination and planning to protect casting and delivery schedules from weather-related delays. Demonstrating flexibility from design through to installation, Ozcast worked closely with the

the project's dynamic requirements, Ozcast also stored items as required, allowing the project to maintain construction momentum and ensuring every element reached site precisely when required.

**A SUSTAINABLE AND EFFICIENT OUTCOME**

By relying on precast manufacturing, the project achieved significant sustainability and efficiency gains. Controlled off-site production reduced waste, improved worker safety, and minimised disruption on the busy construction corridor.

The reuse of custom moulds and optimisation of mix designs also contributed to a lower carbon footprint – aligning with Transport for NSW's sustainability targets and supporting a longer service life for the structures.

**PARTNERSHIP BUILT ON FLEXIBILITY**

For Ozcast, the M12 Central project demonstrated the value of adaptability at every stage – from early design collaboration to delivery logistics. Its ability to pivot quickly to evolving design and scheduling needs played a key role

**ADAPTABILITY IN ACTION – OZCAST KEEPS M12 CENTRAL MOVING**

When faced with evolving designs and tight delivery windows on one of Western Sydney's most complex motorway interchanges, Ozcast's adaptable approach proved invaluable. By adjusting moulds, schedules and production methods on the fly, the team maintained precision, efficiency and safety – ensuring every precast element met exacting standards while supporting construction progress.

In maintaining momentum on site, its contribution exemplified the role of adaptable manufacturing in keeping one of Western Sydney's most significant infrastructure projects on track.

"Adaptability is everything in projects of this scale," says Barry Lindsay, Ozcast's Precast Manager. "Our team's ability to adjust designs and delivery plans on short notice ensured we met quality, safety, and sustainability expectations without compromising timelines." ■

## Seal Cracks Smarter with Crafcro Polyflex

Crafcro Polyflex is a hot-applied crack sealant trusted worldwide for long-lasting road repairs. Now available in meltable packaging, you save time and eliminate waste — no box removal, no mess, just melt and pour.

Ideal for Australian road conditions  
Ideal for councils, road authorities, and contractors  
Shipped Australia-wide from Melbourne and Brisbane

Crafcro, leading pavement preservation since 1976.

Extend the life of your asphalt. Get Polyflex now!
